Electrolyzed water cleaner
AQUA MAGIC

Special electrolysed water ... is friendly to people and the environment and instantly removes dirt and stains

Nature's kindest cleaner ... amazingly effective, chemical free, environmentally friendly.

It removes mould and deters ongoing growth.

Simply spray on, leave a few seconds and wipe off – it's that easy

What is **AQUA MAGIC**?

Wonder water, the ideal cleaner!

AQUA MAGIC is special water that works in a similar way to conventional cleaners; however it contains no active ingredients such as surfactants, synthetic chemicals, fruit oils or alcohol. It is an entirely new type of cleaner that is produced by subjecting **pure water** to the process of **electrolysis**, which polarises electron ions, which removes dirt by activating the power of water itself!

You can use it with assurance anywhere in the home and for industrial purposes.

- **Excellent cleaning power**
- **Colourless, odourless & non-irritant**
- **Disinfects and deodorises**
- **Prevents oxidation**
- **Prevents static electricity**
- **Environmental pollution free**
- **Bubble free and residue free**

What is the benefit?

It is safe! AQUA MAGIC consists of 99.7% pure water, which is almost its only ingredient.

It causes none of the problems of conventional cleaners that have so far been of concern to the environment. The remaining 0.3% is potassium carbonate, which is commonly used as a food additive. **AQUA MAGIC** is not a detergent. It is a unique cleaner crammed with negative, de-oxidizing ions giving its pure water base the properties which softens, emulsifies and encapsulates dirt particles.

How to use **AQUA MAGIC**

To clean, simply spray on the surface then wipe away or wash off. For stubborn stains, spray repeatedly and leave for a short while. To disinfect, simply spray surface till thoroughly wet. Let stand for 30 seconds then wipe away.

What is **AQUA MAGIC** suitable for?

You can use it on any surfaces– glass, mirrors, marble, metal, plastic, rubber, tanned leather, refrigerators, microwave ovens, foot areas, vegetable and fruit, parts, tools, carpet stains, fabrics, paint surfaces, timber floors, computers, musical instruments, bathroom, toilet, tovs, pets, garbage bins.

How Does AQUA MAGIC work?

Surfactant effect

In the case of special electrolyzed water, which has been packed with a large quantity of negative ions by means of electrical energy, electrons and ions furiously fly about within water molecules, and each water molecule cluster becomes very small. Consequently, they tend to permeate between dirt and objects and are able to lift off dirt more effectively than ordinary water.

Detachment, Dispersion

AQUA MAGIC, which consists of negative ions within special electrolyzed water molecules, envelops the molecules of objects and dirt and ends up changing the electric potential entirely into negative potential. Consequently, the dirt molecules and the surface of objects, which have taken on the same negative potential, repel each other and separate.

Emulsification and separation

Molecules of grease, etc. that have been lifted off separately after being surrounded by negative ions and made smaller are emulsified in this water.

Soap effect

When dirt emulsify with fat and oil in this electrolyzed water, it will turn into liquid soap, they display the same cleaning effect as detergent. As a result, oily stains become easy to wash off and remove.

Anti-bacterial & Anti-oxidation
 Water has a neutral ph of between 7-8, when it is slightly alkaline it is clean and refreshing and tastes like spring water. When water has ph of around 11, it has cleaning power. However if water has a ph of 12.5 as **AQUA MAGIC** does, it now also has anti-bacterial cleaning power. **It can eliminate dirt as well as bacteria.** It is regenerated water that assists in repelling rust; it is also suitable for metal implements and car washing.

AQUA MAGIC is so versatile that it can be used in either the home or for industrial applications

1 Watch band (belt) cleaning test

*Soak metal watch belt for 30-60 sec, then move and agitate in **AQUA MAGIC**

It penetrates minute spaces instantly and removes dirt, oils and fats attached to metal surfaces.

2 Penetration test [Soaking tea leaves for 30 seconds]

AQUA MAGIC, alkaline ionised water, rapidly penetrates the veins of a leaf and extracts far more nutrients than tap water can. This penetration power can be applied in various industries such as engineering, food products, and health care.

3 Emulsification and dispersion test

AQUA MAGIC, displays its cleaning power by emulsifying oils without the use of chemical and surface-active agents.

AQUA MAGIC'S strong alkalinity eliminates germs from surfaces. However the alkali level is low so it is not caustic and it is safe and gently like water.
